

Share practical experiences related to the topic

(What is currently working in your environment?)

- ZWTH + DESY have chat-bots
- Chat-bot points to documentation
- Bots confidently return non-relevant info

Identify key challenges on the topic

(What are the main pain points or limitations?)

- Different sources
- How can Model prioritise
- What will the user do?
 -
- Maintaining "training data" aka. documentation
- Can AI identify conflicting
- Discovers mismatched advice
- Handle privacy properly

Select the 3 most promising approaches

(Each table selects its top 3 ideas for plenary voting)

- write input AI-ready for training
- instead
- train on tickets
- have specialized Model (embedding) remove
privacy-relevant information

Share practical experiences related to the topic (What is currently working in your environment?)

JSC, EPCC (former manager of user support team)

- Also training institute
- UCL: manager of support team
- JISC: looking for internal clusters / automation
maintaining reliability of clusters
- RSE at Birmingham, diverse user groups

1. software installation → money to spend → tell user how to use
- which software install requests
can we fulfill
→ FAQ → documentation

2. generalization:
- not only voice
- understand different learning types
- group user fit for ticket handling
- allowing tickets to be public
- dashboards
Allowing users to find information without asking us

3. (tools)
get own experience before ~~going~~ getting in touch with users

Share practical experiences related to the topic
(What is currently working in your environment?)

- modules only on compute nodes

Identify key challenges on the topic

(What are the main pain points or limitations?)

- make users understand why VSCode is not HPC, they break login nodes
 - ↳ send warning emails
 - ↳ use cgroups + monitoring stack
 - ~~most~~ users don't read!!!
 - ↳ have templates for answers
 - have to get you reply a ticket
 - ↳ they're more impatient;
 - how to get newbie users to not do shitty stuff
 - ↳ do trainings, educate the ones that use windows
 - ↳ do a suggestion, I not believe that, you're on your own.
 - questions about specific software
 - ↳ enable forums
-

Identify key challenges on the topic

(What are the main pain points or limitations?)

- Onboarding
 - Documentation
 - restart documentation from scratch if needed
 - FAQ
 - internal docs for first-level support
 - transfer of workflow to HR
- How to make people do the training
 - word of mouth
 - training runs X times a year
- Resources & money to deliver training
 - using AI?
- How to engage users?
 - doing the course on-line
 - + hands-on examples

Share practical experiences related to the topic
(What is currently working in your environment?)

- Scientists access but don't know how to use
- similar questions on ticket system $\rightarrow$ trainings
- run trainings and document, FAQ
- 3 levels of different people
- AI assistant
- MPI/OpenMP courses
- If it takes more than X, on your own
- once it works, it works, no care for perf.
- Students just sit.

Select the 3 most promising approaches

(Each table selects its top 3 ideas for plenary voting)

- Good documentation and know issues, FAQ
- AI/RAG system to answer "Advanced search"
- In person office hours / coffee break
- Tailored training
→ specific issues

Share practical experiences related to the topic
(What is currently working in your environment?)

TICKETING SYSTEMS USED :

- OSTICKET
- ORACLE SYSTEM7
 - STANDARD REPLIES
 - 3 + SYS ADMINS
- JIRA X 2 (+ CONFLUENCE)
- RT X 2 ~~RTS~~
- ZAMMAD
- IAT + INT ASSISTANCE

Propose promising approaches to address these challenges

(What ideas, methods, or solutions could help?)

- LIMIT THE NUMBER OF TICKETS
- IMPROVE DOCUMENTATION X2
- VIRTUAL APC SUPPORT
- USE AI TO COVER LACK OF FPL
- AI + VIDEO
- COMM BETWEEN USERS - MONTHLY (20)
- WORKING GROUPS WITH USERS,
FEEDBACK LOOP

Identify key challenges on the topic

(What are the main pain points or limitations?)

- NOT ENOUGH PPL X2
- FUNDING FOR STAFF
- USER INFORMATION IN TICKETS
(VISIBILITY)
- YOUNGER GEN ~~DOES~~ NOT LIKE
TEXT, VIDEO & AI COULD
WORK
- INSTALLING PACKAGES / SW
(SPACE)
- ~~BOX~~ BOX GOOGLE-ABLE
-
